CA 911 Outages		
Northern California	Central California	Southern California
No 911 Outages	No 911 Outages	911 Outage

911 Outages/Remote/Community Isolations:

Network Outage, Placentia, Orange County

On 06/19/18 at 1807 hours, CA 911 Branch advised the California State Warning Center (CSWC) that Placentia Police Department (PD) in Orange County is in alternate answer to Brea PD due to an AT&T network outage affecting all 911 lines at Placentia PD. Per the CA 911 Branch as of [06/21/18 at 1909 hours](#):

- The outage began on 06/19/18 at 1400 hours.
- AT&T experienced both fiber and copper cable damage caused by construction boring.
- AT&T crew is onsite splicing in new fiber pairs that are pre-existing to bypass the section that was cut.
- [AT&T has completed replacement of a 2,100 ft. section of copper cable and crews are onsite splicing the 2,700 cable pairs.](#)
- Estimated time of restoral is [unknown](#).
- CA 911 Branch is monitoring and will provide updates when further information is received.

Service Interruptions:

- None reported.

WEATHER OF CONCERN

Weather of Concern

Northern California:

- An Excessive Heat Watch is in effect for much of the Northern California inland region beginning today through Sunday.

Central California:

- High temperatures will be above the century mark over much of the San Joaquin Valley, lower foothills and the Kern County desert during this period, making it the longest stretch of triple digit heat so far this year.

Bay Area:

- Triple digit temperatures are possible today into Saturday for portions of several interior Bay Area counties, with Saturday being the warmest day at mid 90s to low 100 degrees.
- Temperatures in counties along the coastline will remain normal with low heat risk impacts.

Southern California:

- Excessive Heat Warnings have been issued for several interior counties through today.
- High temperatures today across the valleys, deserts and lower mountain elevations of southwestern California are expected to reach the 90s to low 100s. These hot temperatures will result in Moderate Heat Risk to many areas, with locally High Heat Risk in some lower mountain elevations and across portions of the Antelope Valley.

Operational Area Contingency Actions

- Please see attached for Cal OES Inland and Southern Region OA's Heat Contingency Actions.

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

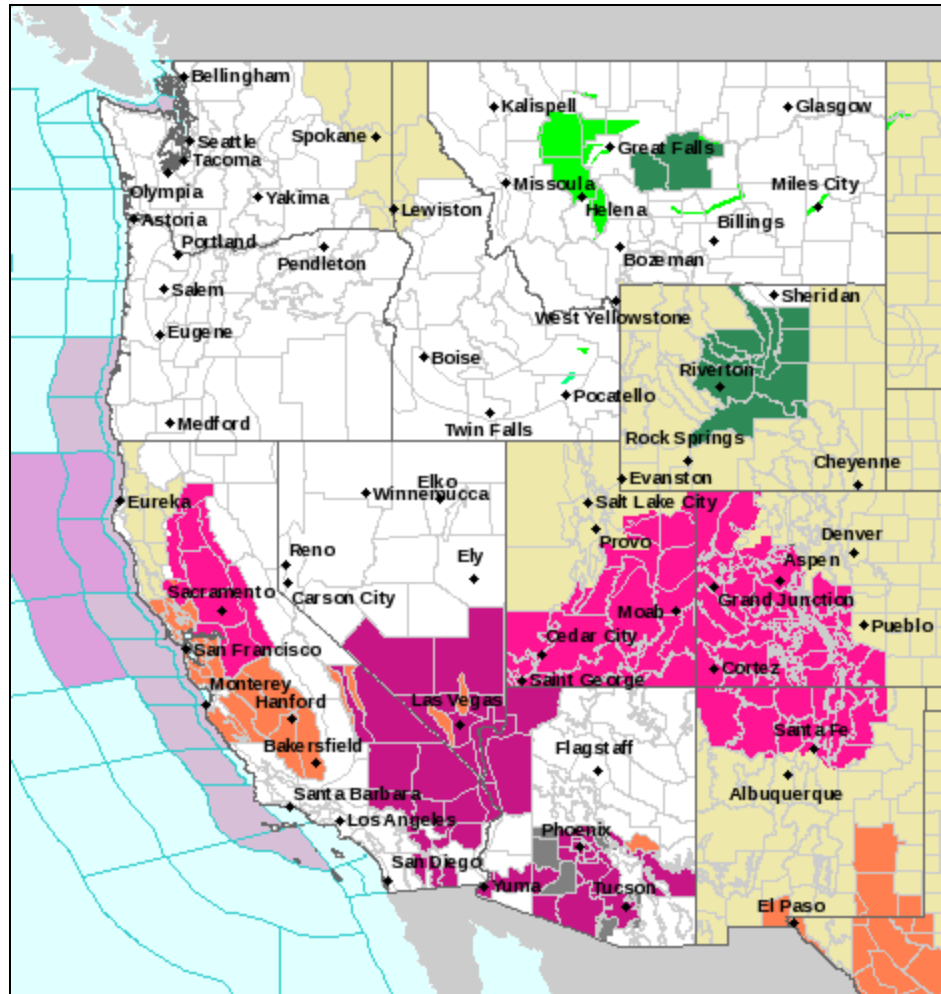

The ridge will build over the coast and ultimately over Northern California today through the weekend. Temperatures will climb to above to well above normal status during this period. At the same time, an inside slider like Pacific wave will skirt up and over the ridge and allow for strengthening northerly winds starting late this afternoon and extending into Sunday morning. The most pronounced NW-N-NE wind flow in terms of speeds (up to 30 mph) and low humidity (down to 10%) will be found within the Sacramento Valley and surrounding foothills on Saturday. Thus, a high risk has been issued due to increasing confidence of the event although maximum speeds is still a little in flux. Far eastern areas will see some cooling effects due to a dry cold frontal passage.

Remaining confident that the ridge and significant heat would be short lived as it is expected to break down early next week due to a Pacific trough passage. W-SW winds will increase and humidity values will fall along the east slopes of the Cascade and Sierra Ranges favoring the Monday-Tuesday period. Temperatures should still be above normal early next week.

SOUTHERN CALIFORNIA

Sunny, warm weather will continue through the weekend as high pressure remains lodged over the Southwest. Today will likely be the warmest day over Southern California as many inland valley locations top out in the upper 90s. This weekend, slightly stronger onshore flow will bring marine layer stratus and a bit of cooling to the valleys. Central California will not see much change in temperatures and highs will be in the 100-105 degree range across the San Joaquin Valley and lower Sierra Foothills through Monday. Winds will be light overall with just some sea breezes to 15 mph along the central coast each afternoon. Minimum relative humidity (RH) will drop into the teens across the central coast interior and areas in and near the desert. Light winds and clear skies will allow for good recovery at night. Long range models indicate a series of troughs may weaken the high pressure ridge, bringing slightly cooler weather to all areas during the second half of next week. No thunderstorms are expected through the end of the month.
